PRESS RELEASE

VSB France launches its second repowering project

Nîmes, 19 November 2026: VSB France, a power producer and subsidiary of TotalEnergies, has begun repowering the Bois Lislet wind farm in the Aisne department of northern France. The project will bring the wind farm's installed capacity from 4.6 MW to 9 MW, nearly doubling it.

The Bois Lislet wind farm is located in the municipality of Montloué and currently comprises two Nordex N90 turbines, each rated at 2.3 MW. The wind farm entered operation in 2007, and VSB France received approval for the repowering project in 2022.

Construction began in October 2026
Work began in October 2026 with the refurbishment of access roads and crane pads. Coverwind Solutions, part of Muehlhan Wind Services, will begin dismantling the existing turbines in January 2027. The repowered wind farm is scheduled to enter operation in October 2027. The wind farm will continue to have two turbines. The new Vestas V136 turbines will each have a capacity of 4.5 MW and a blade tip height of 180 metres. They will be among the most powerful turbines VSB has installed in France to date.

The project further strengthens VSB France's presence in Hauts-de-France, where the company already has eight wind turbines in operation with a combined capacity of 24 MW. "We are delighted to launch this latest repowering project," says **Maël Lagarde, Managing Director of VSB France**. "Projects like this demonstrate that VSB is a reliable partner with the expertise to deliver repowering projects at every stage."

Repowering is a key area of growth for VSB France
VSB has secured approvals for more than 100 MW of repowering projects in France, both on behalf of third parties and for its own portfolio. The company expects repowering to account for a significant share of its future wind projects. Bois Lislet follows the Les Vents Meuse Sud Repowering project, where work is already well advanced. VSB is also assessing opportunities to repower solar PV farms as a potential avenue for further growth.

About VSB Group

VSB, headquartered in Dresden, is one of Europe's leading vertically integrated developers in the field of renewable energy. The company is part of TotalEnergies since 2025. Its core business is project development of onshore wind and photovoltaic parks, battery storage solutions, their operational management as well as the operation of its own assets as a growing independent power producer. VSB operates in six European countries and has a pipeline of more than 20 GW. Since 1996, it has developed more than 750 wind energy and photovoltaic plants. VSB also provides services for a portfolio of more than 3 GW and is active in the field of e-mobility for freight transport. With its affiliated companies, the Group employs over 500 people.
