

Solar boost for Poland: VSB Group wins auction contract for 303 MWp solar park in Lower Silesia

Wrocław/Dresden, 23 July 2025 – As part of this year's renewable energy auction organized by the Polish Energy Regulatory Office (URE), VSB has secured a contract for difference (CfD) for a 303 megawatt-peak (MWp) solar park: the largest solar project in the history of the VSB Group to date. The fully permitted project is located in the Lower Silesian Voivodeship. Construction is expected to begin in October 2025.

The solar project will span over 260 hectares northeast of Wrocław. Once completed, the expected annual electricity output will be sufficient to supply the equivalent of around 117,000 households with clean, renewable energy. The project benefits from a 15-year contract for difference, ensuring long-term price stability. The construction of this project – which will be one of the largest photovoltaic parks currently under development and construction in Poland – is scheduled to commence in October 2025, with grid connection anticipated in Q2 2027.

“With this project, we are setting a new benchmark for solar energy in Poland,” says **Hubert Kowalski, Managing Director of VSB Poland**. “In just a few years, it could evolve into one of Europe's largest hybrid energy projects, combining photovoltaics, battery storage, and wind power. Its success will depend on economic conditions and future regulatory frameworks. At VSB, we maintain an ongoing dialogue with local communities to jointly develop stable, utility-scale renewable energy solutions. Projects like this would stand no chance without the consent and support of local stakeholders,” Kowalski adds.

Dr. Felix Grolman, CEO of the VSB Group, states: “We are proud to actively contribute to the energy transition with this flagship photovoltaic project – one of the largest in Poland. It embodies the scale and ambition needed to drive meaningful change, while enhancing energy security in Poland and across Europe. This solar park marks a significant milestone on that journey.”

The ground-mounted photovoltaic plant represents the second landmark project for VSB Poland and the VSB Group in recent years – following the development and launch of construction of what is currently the largest wind project in Poland: Miejska Górka, with an installed capacity of 190.8 megawatts, developed for our client and partner TAURON Zielona Energia.

About VSB Group

VSB, headquartered in Dresden, is one of Europe's leading vertically integrated developers in the field of renewable energy. The company is part of TotalEnergies since 2025. Its core business is project development of onshore wind and photovoltaic parks, battery storage solutions, their operational management as well as the operation of its own assets as a growing independent power producer. VSB operates in six European countries and has a pipeline of more than 18 GW. Since 1996, it has installed more than 750 wind energy and photovoltaic plants. VSB also provides services for a portfolio of more than 3 GW and is active in the field of e-mobility for freight transport. With its affiliated companies, the Group employs over 500 people.
