

Bosjean wind farm inaugurated: VSB France reaches more than 45 MW of wind capacity in the Puy-de-Dôme

Nîmes (France) / Dresden, 6 July 2026 – VSB France, the French subsidiary of VSB Group, which operates across Europe, has inaugurated the Bosjean wind farm in the Puy-de-Dôme department in central France together with representatives of the municipality of Saint-Sulpice. With the new wind farm, VSB is strengthening its presence in the French market and further expanding its wind energy portfolio.

The Bosjean wind farm consists of six Vestas V110 wind turbines with a total capacity of 12.8 MW. Annual electricity production is estimated at 24 GWh. This corresponds to the annual electricity consumption of more than 12,000 people and avoids around 7,800 tonnes of CO₂ per year. With Bosjean, VSB France now has two wind farms in the Puy-de-Dôme department, which together generate 102 GWh of renewable electricity per year and avoid 30,000 tonnes of CO₂ annually.

VSB France developed and built the Bosjean wind farm and is also responsible for its technical and commercial management. During the construction phase, VSB France relied on cooperation with local and regional companies. These include TP Lyaudet for earthworks, OT Engineering for civil engineering and Cégelec for the grid connection. CIC Corporate & Institutional Banking (CIC CIB) supported VSB in financing the project.

The wind farm is also equipped with a patented next-generation 3D bird detection system. The system was supplied by European partner BIOSECO and supports the protection of avifauna during operation.

“What makes Bosjean particularly special to me is the way we have worked together: with local companies, the municipality and financing partners on site. This is exactly how we understand project development at VSB – as a project that generates renewable energy while also keeping value creation in the region. For VSB, this is part of our commitment as a responsible project developer,” says **Dr Felix Grolman, CEO of the VSB Group**.

“I am very pleased to inaugurate this new wind farm, which further strengthens our presence in the Puy-de-Dôme,” adds **Maël Lagarde, Managing Director of VSB France**. “With the Bosjean wind farm, we now have two wind farms in this department, which together generate 102 GWh of electricity per year. This is a strong opportunity for the region to actively engage in the energy transition and make an important contribution to greater sustainability for future generations.”

About VSB Group

VSB, headquartered in Dresden, is one of Europe's leading vertically integrated developers in the field of renewable energy. The company is part of TotalEnergies since 2025. Its core business is project development of onshore wind and photovoltaic parks, battery storage solutions, their operational management as well as the operation of its own assets as a growing independent power producer. VSB operates in six European countries and has a pipeline of more than 20 GW. Since 1996, it has developed more than 750 wind energy and photovoltaic plants. VSB also provides services for a portfolio of more than 3 GW and is active in the field of e-mobility for freight transport. With its affiliated companies, the Group employs over 500 people.
