

One step ahead every time you charge: Charging as a service

Electric vehicles are becoming the new standard for corporate and logistics fleets. With lower emissions and reduced running costs, they offer clear benefits

For companies with logistics operations, the cost of charging power will become a **key competitive factor** in the future. Today's fuel costs will be replaced by **total energy costs** for electricity procurement, grid use and charging infrastructure. Strategic planning and optimisation is where the **greatest savings potential** lies. You need a partner who can integrate all the components and make your charging infrastructure future-proof – a partner like VSB.

Our focus: Optimising your total energy costs

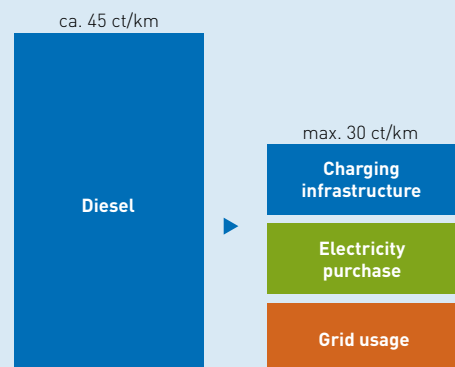

We will provide comprehensive advice and develop a tailored strategy to make the transition to sustainable mobility as easy and efficient as possible for your company.

Use our **turnkey charging infrastructure** as a charging-as-a-service solution and benefit from a sustainable and cost-effective energy supply – **without high up-front investment**. Use electricity from your own wind or photovoltaic systems – ideally supplemented by battery energy storage systems – or purchase **renewable energy** through a VSB green electricity contract.

By combining our charging-as-a-service solutions with renewable energy sources, you can lower your energy costs, **reduce your dependence on the power grid** and secure a decisive long-term competitive advantage.

Reduce your **total energy costs to less than 30 cents per kilometre** – including grid usage, electricity purchase and charging infrastructure.

Total energy costs: Fossil fuels vs. charging as a service

Depending on the investment and energy strategy, switching to electric vehicles can reduce total energy costs by up to a third.

Get started now – with our sustainable, flexible and cost-effective solution for your electric truck fleet!

Why charging as a service from VSB?

Charge more sustainably and save money: Reducing costs thanks to renewable energy

We are convinced: Sustainability is not a luxury, but a necessity. With VSB's charging-as-a-service solutions, you can use solar and wind energy with stable costs and reduced grid fees, saving up to €5,000 per vehicle per year.

One-stop solution

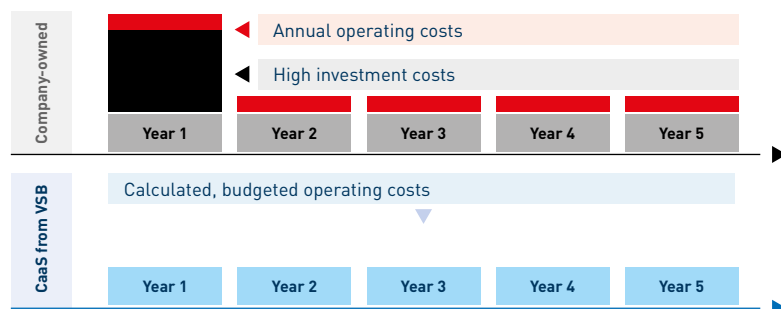

VSB offers customised charging-as-a-service solutions with fixed, calculable monthly costs – from installation and maintenance to ongoing energy cost optimisation.

Flexibility that grows with you

Your charging infrastructure adapts to your needs, stays up to date and does not require a large investment, so you can always benefit from the latest technology.

Company-owned infrastructure vs. VSB's charging-as-a-service solution

- No high up-front investment
- Fluctuating operating costs replaced by predictable monthly expenses
- Easy financial planning thanks to fixed term

Choose a sustainable future with charging as a service from VSB, making your charging infrastructure more efficient and cost-effective. Start now and secure your competitive advantage with every charge.

Is charging as a service not what you need?

Browse our website for other innovative approaches and take your fleet to the next level:

IT'S THIS SIMPLE

1. Contact us

We will start by discussing your individual needs and circumstances.

2. Analysis and planning

We will design a solution to meet your needs. To help you make informed decisions, our site planning takes into account your current and future energy costs. With VSB, you benefit from extensive expertise and innovative approaches to optimise the design of your charging infrastructure.

3. Installation

Our experts install the charging infrastructure quickly and efficiently. You can expect minimum effort and maximum reliability.

4. Operation and maintenance

We provide ongoing maintenance and support to ensure your charging infrastructure runs smoothly.

5. Billing

Transparent, simple and predictable billing models ensure you retain full cost control.
