energy for you

Global challenges – regional solutions

Energy policy today means taking political responsibility with climate change management. Therefore, stronger expansion of renewable energy is a logical and economically reasonable decision. No matter where in the world. VSB has already been pursuing this strategy since 1996. As an internationally successful company in the renewable energy sector we lead by example and perform sustainably. You can rely on this leading service provider to plan, develop and manage your wind and solar farm. For you, we combine the knowledge of experienced professionals in energy services.

Why our customers like us

Because they know that we are a fair and reliable partner. Our high quality standards have been certified according to the **DIN EN ISO 9001:2015** in Germany, Poland and France. If you also entrust us with your ideas, we will develop your commitment for sustainability into successful designs. This will protect the climate and conserve the environment.

“Invest in eco-friendly and resource-saving technologies and together we will shape tomorrow’s energy landscape.”

**Marko Lieske, Managing Director
VSB Holding GmbH**

TWO DECADES OF EXPERTISE

Your green investment needs a sound and reliable partner from the very beginning: and this is VSB. For more than 20 years, our passion for renewable energy has been driving us to find new ways to optimize our service delivery. From site acquisition through planning and construction to operation – here you will find all the necessary skills under one roof. You can decide whether to only use one single component or to benefit from the complete range we offer. Just rely on our experience and the expertise gained from installing more than 1,100 megawatts of capacity.

- » Project development
- » Construction
- » Operational management
- » Maintenance and repairs
- » Repowering and dismantling
- » Mergers and acquisitions
- » Design and permitting

„We provide our investors with access to investments in sustainable energy infrastructure, which are characterised by stable long-term returns. We are connected to VSB Group by a trusting cooperation and first-class wind energy projects in Germany and France.“

**Francisco Feito, Managing Director
Renewable Energy SUSI Partners AG**

TAILOR-MADE ENERGY SOLUTIONS – A POWERFUL SERVICE PACKAGE

The expansion of renewable energies is progressing dynamically worldwide. Many countries are converting their electricity supply to wind and solar and are working on concepts to make the heating market and transport more climate friendly. Similarly, an increasing number of companies, towns and consumers are reorienting themselves. We accompany this process and develop individual solutions with renewable energies that do not stop at greenfield project development. Rather, we combine innovative energy generation and storage technologies in order to sustainably reduce your costs and CO₂ emissions and support you on your way to energy self-sufficiency. No matter whether you are an industrial customer who wants to supply your plant with clean energy or a community that wants to make its contribution to the energy revolution: with us, you receive a tailor-made overall concept and professional implementation from a single source.

ENERGY FARM MANAGEMENT - SERVICE IS A TOP PRIORITY FOR US

With a wealth of ideas and expertise, we develop tailor-made concepts for wind farms, photovoltaic parks and substations. Our services are as individual and diversified as the projects of our customers: from planning and construction services to tailor-made service solutions for management and maintenance to the dismantling and repowering of wind turbines. Trust in our certified processes and more than two decades of experience. As part of the VSB Group, we work hand in hand and ensure long-term profitability in order to get the most out of your energy farm.

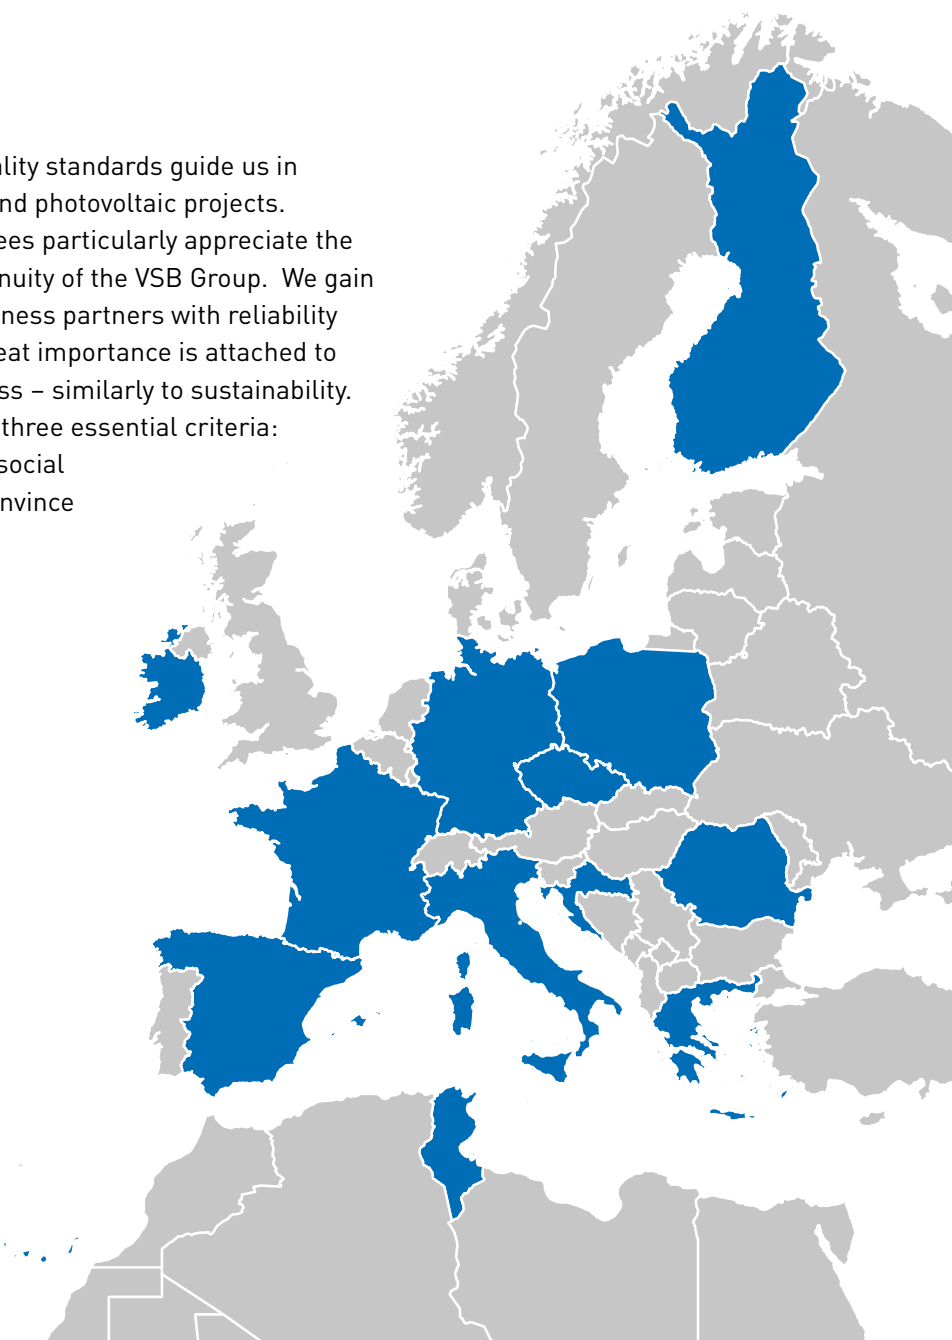

GLOBAL NETWORK – LOCAL EXPERTISE

Why is it so important for a successful renewable energy project to be available locally? It is very simple. Because national and regional conditions vary across the renewable energy sector. Only with a profound knowledge of the respective requirements, it is possible to operate successfully. Our teams of experts are well versed in questions of law, financing and administration. They are proficient in the sophisticated approval processes and familiar with local politics. Knowing exactly what is necessary for local public relations, our employees can individually adjust to specific requirements. Furthermore, they have good relationships with renowned wind turbine manufacturers, they maintain active partnerships with well-known banks and they cooperate closely with recognised specialist contractors. With the VSB Group, you have full access to this whole range of competence.

OUR RESPONSIBILITY

Our corporate vision and high quality standards guide us in the realisation of our wind farm and photovoltaic projects. Customers, partners and employees particularly appreciate the steady business growth and continuity of the VSB Group. We gain and preserve the trust of our business partners with reliability and professional competence. Great importance is attached to transparency, integrity and fairness – similarly to sustainability. Our behaviour is oriented around three essential criteria: ecology, economic efficiency and social responsibility. We invite you to convince yourself of our qualities.
